

Kennedy Borle

Kennedy is a research genetic counsellor with the GenCOUNSEL Study, which is a large scale study aiming to improve access to and quality of genomic counselling in Canada. In this role she has been involved in creating a workforce requirements model to better understand the need for and supply of genetic counsellors and clinical geneticists. She is also currently a PhD Student in Interdisciplinary Studies at the University of British Columbia. Her PhD work is seeking to better understand the unmet need for clinical genetic services in Canada and to identify strategies to improve equitable access to care. In her spare time you can find Kennedy playing soccer and enjoying a craft beer.
