

Kennedy Borle

Kennedy Borle (she/her) is a research genetic counsellor and PhD student in Vancouver, BC. She has been working with the GenCOUNSEL project for over 3 years on a workforce model to estimate the need and supply of genetic counsellors in Canada to understand potential gaps in care. Her PhD is about investigating unmet need for genetic counselling and testing in Canada with the goal of improving equitable access to care. Her other research interests include better understanding how to measure the impacts and value of genetic counselling and integrating genetic counselling into primary care settings.
